# 9334/DM9334
# 8-Bit Addressable Latch

## General Description

The DM9334 is a high speed 8-bit Addressable Latch designed for general purpose storage applications in digital systems. It is a multifunctional device capable of storing single line data in eight addressable latches, and being a one-of-eight decoder and demultiplexer with active level high outputs. The device also incorporates an active level low common clear for resetting all latches, as well as an active level low enable.

The DM9334 has four modes of operation which are shown in the mode selection table. In the addressable latch mode, data on the data line (D) is written into the addressed latch. The addressed latch will follow the data input with all non-addressed latches remaining in their previous states. In the memory mode, all latches remain in their previous state and are unaffected by the data or address inputs.

In the one-of-eight decoding or demultiplexing mode, the addressed output will follow the state of the D input with all other inputs in the low state. In the clear mode all outputs are low and unaffected by the address and data inputs.

When operating the device as an addressable latch, changing more than one bit of the address could impose a transient wrong address. Therefore, this should only be done while in the memory mode.

The function tables summarize the operation of the product.

## Features

- Common clear
- Easily expandable
- Random (addressable) data entry
- Serial to parallel capability
- 8 bits of storage/output of each bit available
- Active high demultiplexing/decoding capability
- Alternate Military/Aerospace device (9334) is available. Contact a Fairchild Semiconductor Sales Office/Distributor for specifications.

**Note 1:** *The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.*

**Note 2:** The ADDRESS setup time is the time before the negative ENABLE transition that the ADDRESS must be stable so that the correct latch is addressed without affecting the other latches.

**Note 3:** All typicals are at $V_{CC}$ = 5V, $T_A$ = 25°C.

**Note 4:** Not more than one output should be shorted at a time, and the duration should not exceed one second.

**Note 5:** $T_A$ = 25°C and $V_{CC}$ = 5V.

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
