

HIGH-PERFORMANCE PRODUCTS

Description

The SK100EL16Y is a high gain differential receiver with variable output swing. Its VCTRL input controls the amplitude of the Q_{HG} and Q_{HG}* outputs. The operating range of the EL16Y control input, VCTRL, is from VBB (large swing) to VCC (min swing), see Figure 2. Simple control of the output swing can be obtained by a variable resistor between the VBB and VCC pins, with wiper driving CTRL. Typical application circuit and results are described in Figures 1a, 1b, and 2.

The SK100EL16Y provides a VBB output for either single-ended use or as a DC bias for AC coupling to the device. The VBB pin should be used only as a bias for the EL16Y as its current sink/source capability is limited. Whenever used, the VBB pin should be bypassed to VCC via a 0.01 μ F capacitor.

The VCTRL pin should be bypassed to VCC via a 0.01 μ F capacitor when the pin is used.

Features

- Extended Supply Voltage Range: ($V_{EE} = -5.5V$ to $-3.0V$, $V_{CC} = 0V$) or ($V_{CC} = +3.0V$ to $+5.5V$, $V_{EE} = 0V$)
- High Bandwidth Output Transitions
- 400 ps Propagation Delay (typical)
- VBB Output
- New Differential Input Common Mode Range
- ESD Protection of >4000V
- Specified Over Industrial Temperature Range: $-40^{\circ}C$ to $85^{\circ}C$
- Available in Both 8 Pin SOIC (150 mil) and MSOP (3mm x 3mm) Packages
- Flammability Rate: UL-94 code V-0.
- Moisture Sensitivity: Level 1.

PIN Description

Pin	Function
D, D*	Differential Data Inputs
Q _{HG} , Q _{HG} *	Differential Data Outputs
VBB	VBB Ref Voltage Output
VCTRL	Output Swing Control

Functional Block Diagram

HIGH-PERFORMANCE PRODUCTS
Package Information
8 Pin SOIC Package

DIM	MILLIMETERS	
	MIN	MAX
A	1.35	1.75
A1	0.10	0.25
B	0.33	0.51
C	0.19	0.25
D	4.80	5.00
E	3.80	4.00
e	1.27 BSC	
H	5.80	6.20
h	0.25	0.50
L	0.40	1.27
θ	0°	8°

NOTES:

1. Dimensions are in millimeters.
2. Dimensions D and E do not include mold protrusion.
3. Maximum mold protrusion 0.15 per side.
4. Dimension B does not include Dambar protrusion. Allowable Dambar protrusion shall be 0.127 total in excess of the B dimension at maximum material condition.

8 Pin MSOP Package

DIM	Millimeters	
	MIN	MAX
A	0.94	1.1
B	0.21	0.45
C	0.13	0.22
D	2.90	3.10
E	2.90	3.10
e	0.65	BSC
H	4.7	5.1
L	0.4	0.7
θ	0°	6°

NOTES:

1. Dimensions are in mm.
2. Controlling dimension: mm
3. Dimension does not include mold flash or protrusions, either of which shall not exceed 0.20.

V_{PP}	Differential Input Swing ⁵	150		1000	150		1000	150		1000	150		1000	mV	
V_{OPP}	Output Voltage ⁷			200			200			200			200	mV	$V_{CTRL}=V_{CC}$

Notes:

1. 100K circuits are designed to meet the DC specification shown in the table where transverse airflow greater than 500 lfpm is maintained.
2. Duty cycle skew is the difference between T_{PLH} and T_{PHL} propagation delay through a device.
3. F_{max} guaranteed for functionality only. See Figure 3 for typical output swing. $VO_{p,p}$ levels are guaranteed at DC only.
4. The device has a DC gain of ~ 140 .
5. Minimum input swing for which parameters are guaranteed.
6. CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the high level falls within the specified range and the peak-to-peak voltage lies between $V_{PP(min)}$ and 1V. The lower end of the CMR range varies 1:1 with VEE and is equal to $VEE + 1.5V$.
7. $VO_{p,p}$ is obtained as follows: Voltages of Q_{HG} and Q_{HG}^* outputs with respect to VCC are measured. The absolute difference between a high and a low state is equal to $VO_{p,p}$.
8. The VOH and VOL limits apply when the V_{CTRL} pin is left open. Otherwise, see figure 2.
9. For part ordering description, see HPP Part Ordering Information Data Sheet.
